DNA Test Report July 27, 2006

Owner's Name and Address:

Registered Name: G8rcreek Raven in Fantasia  
Registration #: PR07581001  
Tattoo/Chip #:  
Call Name: Asia

Breed: Toy Poodle  
Date of Birth: December 31, 2005  
Gender: Female

Optigen Accession #: 06-6528

Test Performed: prcd Mutation Test for PRA

Test Results: Genotype of your dog is Normal/Clear.

Risk for developing PRA: This dog will never develop the prcd form of PRA (progressive rod-cone degeneration form of Progressive Retinal Atrophy). Note that PRA in Poodles appears to consist of at least two different genetic defects. Procd-PRA is by far the most frequently identified cause of PRA in Miniature and Toy Poodles. However, a poodle of known status for prcd-PRA could still be at risk for another, less frequent, and as yet unidentified form of PRA.

Significance for breeding: Genetically Normal/Clear dogs can be bred to any dog and will produce no pups affected with the prcd form of PRA.

For further information, please consult the OptiGen website at [www.optigen.com](http://www.optigen.com).
